

HAIN World White Paper

Version v0.1 — Hybrid AI Native framework overview

What is HAIN World

HAIN World is the public-facing identity for the Hybrid AI Native framework. It provides a structured entry point for architecture notes, terminology, and narrative assets across cloud, edge, and agentic systems.

Why Hybrid AI Native

AI systems are no longer shaped by a single deployment model. Cloud infrastructure, edge execution, and agentic workflows are becoming part of one connected landscape. This shift creates a need for clearer language, cleaner structure, and better public framing.

Framework structure

HAIN World is the public entry point and umbrella identity. HAINOA is the open architecture layer. HAINIZE is the toolkit and developer-oriented entry. In simplified form: HAIN World introduces, HAINOA explains, and HAINIZE enables.
